

# Submission Rules for the Bootcamp

👋 Dear Geeks,

Please follow these rules to keep your work **organized, professional, and accepted** ✅

---

## 1 Repo Structure (MOST IMPORTANT)

All your work must be inside **one repository**.

Use folders for weeks and days, like this:

```
├── week_1/
│   ├── day_1/
│   │   ├── exercises_xp/
│   │   ├── exercises_xp_gold/
│   │   └── daily_challenge/
│   └── day_2/
│       ├── exercises_xp/
│       └── daily_challenge/
└── week_2/
    └── day_1/
        ├── exercises_xp/
        └── daily_challenge/
```

⚠️ If this structure is not followed, your submission may be **rejected**.

---

## 2 Repository Rules

- ✅ Use **one repo** for all weeks and days of the bootcamp.
    - Suggested name: `geeks-institute` or `GENai-bootcamp`
  - ✅ **Only create a new repo if the project is big**, for example:
    - Group project
    - Remote project
    - App with frontend + backend + database
  - ❌ Don't create a new repo for small exercises or daily challenges.
-

### 3 File Rules

- If exercises are **short (< 80 lines)**:
  -  Put them in **one file only** (example: `exercises.py` ).
  - Add comments between exercises:

```
# Exercise 1
print("Hello World")

# Exercise 2
result = (99 ** 3) * 8
print(result)
```

- If exercises are **long (> 80 lines) or require many files** → create separate files  
( `exercise1.py` , `exercise2.py` ).

---

### 4 General Rules

-  Don't mix everything in one folder.
-  Don't use random file names ( `test.py` , `mycode.py` ).
-  Always follow the given folder names.
-  Keep your repo clean.

---

👉 Remember:

- Small work = stay in the **main repo**.
- Big project = make a **new repo** (only if really needed).
-  Messy repo = may be rejected.
